### **DETAILED ACTION**

#### Information Disclosure Statement

1. The Examiner has considered the information disclosure statement (IDS) submitted on 5/19/05.

## Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 3. Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Belehradek et al. (6,198,257).

Belehradek et al disclose a transformerless DC-AC power converter and method in Figs. 1 and 9. An uninterruptible power system (300) for inputting an AC power (312), converting the AC power into a desired power supplying the desired power to a load (326), and upon occurrence of an AC failure, converting a power from energy accumulation means (316) into the desired power and supplying the desired power to the load, wherein the power from said energy accumulation means is passed through two serially connected boost means (16and 16) and thereafter the power is converted into the desired power to be supplied to the load, sense circuit (320) and control circuit (26).

Art Unit: 2838

4. Claims 1-18 are rejected under 35 U.S.C. 102(b) as being anticipated by Miller et al. (5,465,011).

Miller et al disclose an uninterruptible power supply with improved output regulation in Fig. 1. An uninterruptible power system (1) for inputting an AC power (2), converting the AC power into a desired power supplying the desired power (10) to a load (L1 and L2), and upon occurrence of an AC failure, converting a power from energy accumulation means (16) into the desired power and supplying the desired power to the load, wherein the power from said energy accumulation means is passed through two serially connected boost means (20 and 24) and thereafter the power is converted into the desired power to be supplied to the load, a rectification circuit (10) and suppressing input current harmonics (8), to detect the presence or absence of voltage across the main AC power line a detector circuit (14), DC-DC converter (20 and 24) and the AC main power (2) connected to a 2- way ON-OFF switch (18).

## Response to Arguments

5. Applicant's arguments with respect to claims 1-18 have been considered but are moot in view of the new ground(s) of rejection.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Adolf Berhane whose telephone number is 571-272-2077. The examiner can normally be reached on Monday- Friday 8 AM to 6 PM.
